Vim features

- Keyboard focused.
- Text autocompletion
- Terminal multiplexed
- More than 200 default key commands.
- Highly configurable
- Programmer focused
- Modes for implementing different functions

Modes

Vim has 3 main modes with its variations:

Insert mode

Mainly we will enter this mode with the key `i` from normal mode. In this mode any character key we pressed will be inserted on the place of the cursor.

Normal mode

This is the default mode of vim. When you start up vim you are in this mode. In this mode you can type several commands to change to other modes, move efficiently the cursor, paste, etc..

Visual mode

In this mode, which has several variations you can select text to cut, copy, replace. Its variations consist in the way you select code, for ex: Visual line will be selecting line by line while visual will be selecting character by character.
